SAUDI VISION 2030 MOBILITY INITIATIVE

UrbanPulse Saudi Analytics

AI-driven real-time traffic intelligence and predictive urban mobility for kingdom-wide smart infrastructure.

---

3 Major Cities
Riyadh, Jeddah, Dammam

40% Cut
Congestion Reduction Target

STRATEGIC PLATFORM

Transforming Urban Transit Across the Kingdom

Edge IoT Sensing

Over 12,000 smart optical sensors telemetry directly into central command.

Neural Signal Optimization

Adaptive AI adjusts traffic light schedules based on live flow density.

Multimodal Integration

Unified dispatch combining metro, bus, autonomous shuttles, and EV fleets.

IMPACT AT SCALE

Quantifiable Mobility Performance

-35%

Peak Commute Delay

1.2M

Tons CO2 Reduced Annually

99.4%

Incident Detection Rate

CONTROL CENTER

Real-Time Traffic Command Hub

1. **Automated Anomaly Detection**
   Instant recognition of vehicle breakdowns and lane obstructions.
2. **Emergency Vehicle Prioritization**
   Green corridor routing cuts ambulance response times by 45%.
3. **Dynamic Speed Management**
   Variable speed limits on arterial expressways during weather events.

IMPLEMENTATION ROADMAP

Phased Kingdom Deployment

PHASE 1 (2024)

Riyadh Core

Deploy sensor grid across major arterial corridors and Metro hubs.

PHASE 2 (2025)

Western Region

Integrate Jeddah & Makkah high-density pilgrim corridors.

PHASE 3 (2026)

Eastern Province

Freight corridor optimization connecting Dammam port & industrial zones.

Powering the Next Era of Mobility

Partner with UrbanPulse to drive Saudi Arabia's smart city evolution.
